

Single-family house

Reference

Renovation and remodelling of a private bathroom

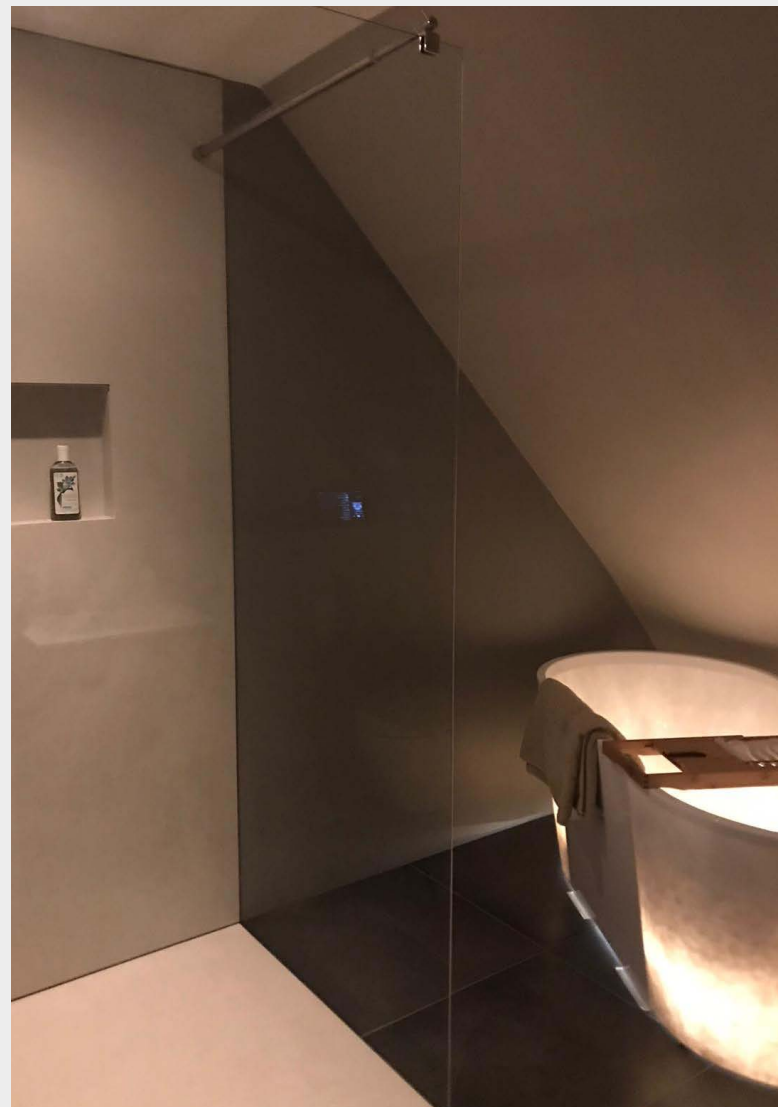

Location

Isernhagen, Germany

Year

2021

Project type
Refurbishment

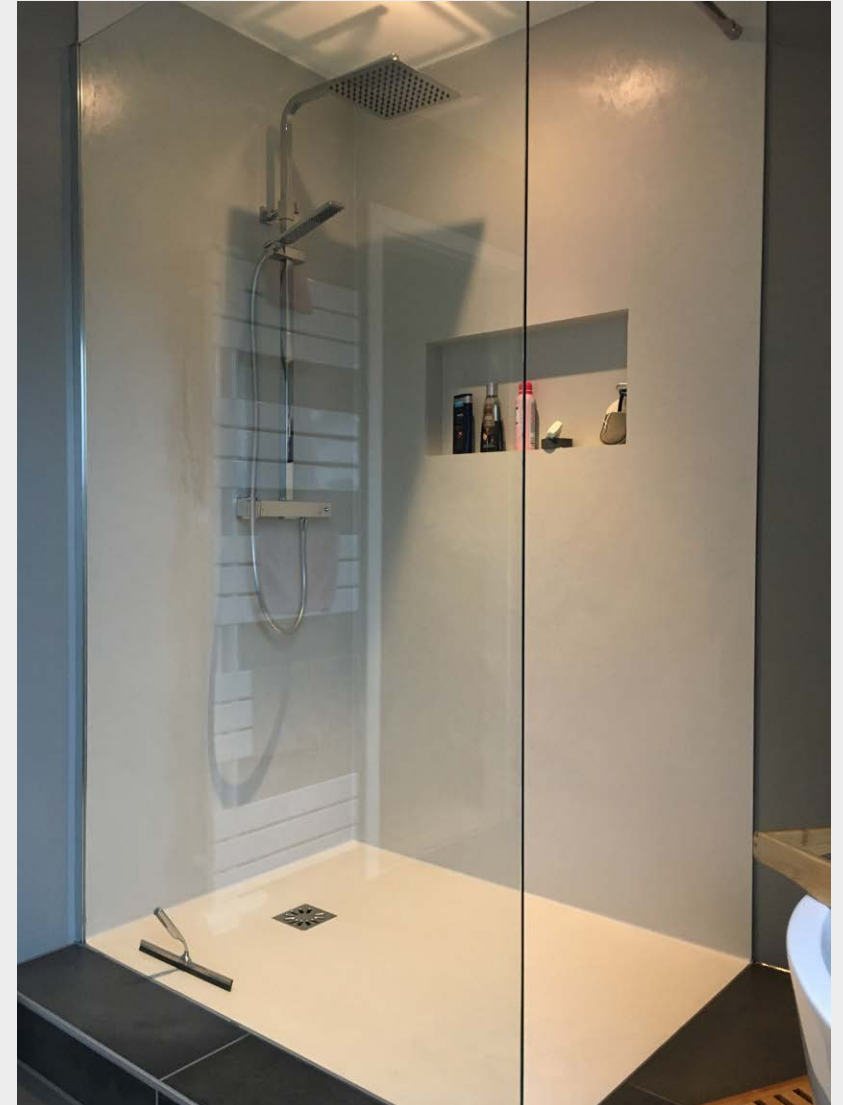

Challenge

The sewage pipe connections were too high to be able to realise the desired floor-level shower.

Implementation

After the joint planning of the client together with the wedi field service, it was decided to place the bathtub and shower on a platform created from wedi building boards. The Fundo substructure set was used under the Fundo Primo floor element to achieve the right height for the platform. This made it possible to fulfil the requirement for a floor-level shower. The entire shower area was clad with design surfaces from the wedi Top Line.
